<b>Location</b>	Virtual for Florence Firestone Community	<b>Attendance or Estimated Reach</b>	42

### **Purpose of Event:**

Provide WaterTalks education and gain community input on issues.

### **Means used to Collect Feedback:**

Notes/Word Doc

### **Event Summary:**

This engagement was done with 20 youth and about 20 adults. It was a hybrid experience. This Florence Firestone area has been emphasizing clean water and more agriculture as instituted in their 2019 community plan. This location is not considered a “cool school”, but they have various plant species with various water needs. There was a farmer from Chicago, and we all had educational discussions. A majority have trust issues from past experience with water quality in the area. They were happy with what they learned from the educational component, mixed with the experience of Chicago and local past experience, the students and adults were able to reconnect and redefine water. Group is interested in project development and water conservation. We discussed water projects that could be done at this state school, which used to be a juvenile court in the past. The staff, students and online participants were eager to transform this space into a space for healing. They are incorporating new green technology in their garden that creates water from the air. The WaterTalks survey link was shared to obtain more response for this area.
